1 Introduction

Home Fair is an online real estate software application that manages the overall operational activities and processes, starting from the management of the property, to the management of real estate agencies, agents, clients and financial transactions. It provides comprehensive reports for managing the Real Estate agency performance and efficiency, and enables the management for a better decision-making.

2 Project Features

Location Details:

It is very important that you include proper address and location details about your property in a real estate listing. This includes the exact location, a valid address, the nearby landmarks, and even guidelines on how to reach the place. It makes your whole property listing even more convenient because of the navigation features.

Property Information:

It is very important to ensure that the interested visitors are able to contact the property owner easily. The basic information includes your name, phone number, and email address. This applies whether you are selling the property or trying to let it.

Customer Opinion:

Customer can opinion on their like property.They can also buy,sell and rent in our homefair site.

3 Conclusion

Home Fair is the software application developed for real state company.The main purpose to develop this project to resolve the issue of both buyer and seller. The seller can submit the property what he/she wants to sale with a full house or flat details and buyer can search the property according to their budget, location then direct contact to the seller. This project aims at developing an efficient info management system for the real estate industry, client management and maintaining the property listings.

In future, we will try to add google map in our properties features.We will also include rating system and optimize our project and share our projects in social media.

4 Project Entity-Relationship Diagram

This is the Entity Relationship Diagram of our project.
